SUMMARY

Full Stack Engineer with 6+ years building scalable consumer applications in ever-evolving startup environments. Expert across the stack—Python, TypeScript, React, Next.js, Postgres—with deep experience in FastAPI, NestJS, Redis, and GenAI/LLM integration. I deliver high-impact features from concept to production in fast-paced environments.

EXPERIENCE

Full-Stack Software Engineer

Cardio Diagnostics

February 2025 - October 2025

- Led a cross-functional team to define requirements, translate business needs into user stories, to build a web application from the ground up for customers to order tests, view results, and manage workflows.
- Architected, built, and deployed a RAG pipeline using AWS Bedrock and OpenSearch that enabled clinicians to rapidly access and interpret insights from epigenetic blood test results, enhancing explainability of output.

Founding Engineer

Plastic Labs

September 2024 - January 2025

- Architected and deployed @YouSimDotAI, an autonomous Twitter bot using Python and Twitter/X's API that generates AI simulations from trending topics and user mentions, driving over 1M organic impressions through automated content generation and engagement systems.
- Spearheaded development of 20+ core platform features for bloombot.ai including LLM-backed real-time conversation handling using OpenRouter, LangFuse, and Django, authentication flows, and settings management, while implementing comprehensive testing and monitoring infrastructure.

Software Engineer & Co-Founder

Evan's Gambit

July 2023 - August 2024

- Architected and developed a SaaS business reporting solution using Next.js, Node.js, and React.js, integrating generative AI to enhance decision-making capabilities.
- Developed Retrieval-Augmented Generation (RAG) applications using LlamaIndex, Python, FastAPI, and Redis, processing over 1,000 hours of audio and improving data accessibility by 40%.

Full-Stack Software Engineer

GenoPalate

March 2022 - March 2023

- Solved and implemented system integrations and automation with Python, Terraform, and AWS Lambda, decreasing processing times by 95% and enhancing data throughput by 35%.
- Directed cross-platform application development in React, React Native, and TypeScript, achieving a 18% increase in user-base through superior UI/UX and performance optimizations.

Full-Stack Software Engineer

Prodly

June 2020 - January 2022

- Pioneered greenfield Salesforce solutions, developing 15+ React and Node.js features using AWS Elastic Beanstalk and S3, implementing CloudWatch monitoring to improve stability and NPS by 30%.
- Developed robust testing protocols with Jest and Selenium, reducing bugs by 20% and ensuring high system stability.

Operational Support Engineer

Southwest Power Pool

June 2017 - May 2020

- Implemented seamless automation for daily deliverables using Python, MongoDB, and distributed computing, reducing costs by 16% and enhancing reliability of the bulk electric system.
- Developed a C# application for real-time streaming data visualization using .NET Core, which halved analysis time and improved customized reporting capabilities.

SKILLS

Python, TypeScript, Elixir

React.js, Next.js, Mantine, React Query

FastAPI, Node.js, Nest.js, Django

MongoDB, PostgreSQL, Redis, DynamoDB, SQLAlchemy, Prisma

AWS (Lambda, ECS, RDS), Docker, Kubernetes, Terraform, GitLab, Git Actions

LlamaIndex, Azure OpenAI service, Amazon Bedrock, LangFuse, Comet, OpenSearch

Pandas, PyTorch, TensorFlow

EDUCATION

Bachelor of Science, Electrical Engineering

Louisiana Tech University • Ruston, LA • 2017
